#### ***Response to Arguments***

10. Applicant's arguments have been carefully considered but are not deemed to be persuasive. At page 8 of the Remarks, applicant argues that Anthony relates to electroforming which is distinct from electroplating. This argument is not convincing. Electroforming is a branch of electroplating technology. See the Lowenheim text, *Electroplating*, page 6. The Anthony process is directed to the deposition of metal on the surface of a semiconductor workpiece which defines a plurality of recesses. This is the same process recited by applicant.

Art Unit: 1742

11. With respect to Carey et al applicant points out that the process of claim 1 reverses the electroplating power to control the deposition of further metal ions over the recessed microstructures and argues that Carey et al teaches that reverse pulse plating can be used to remove deposited metal ions, not to control the deposition of further metal ions. This argument is not persuasive. The operative step recited in claim 1 is the same step disclosed by Carey et al, i.e., reversing the electroplating power supplied between the anode and the exposed surface of the workpiece for at least a portion of a second time period. Contrary to applicant's argument, by modifying the contour of the initial deposit, Carey et al do control the deposition of further metal ions through the use of reverse current by improving the contour of the further deposit.

12. At page 10 of the Remarks, applicant argues that there is no reason why one skilled in the art would be motivated to combine the teaching relating to electroplating of Creutz and Sonnenberg et al with the teachings of Anthony. This argument is not convincing. The use of the compounds disclosed by the secondary references would have improved the properties of the deposited formed by Anthony in the manner taught by the secondary references.

13. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period

Art Unit: 1742

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
